

1. Can we apply more than one css class to html tags? If yes, how to implement?

```
<!DOCTYPE html>
<HTML>
<head>
  <style>

    .class2{
      color:BLUE;
    }
    .class1{
      border: 3px solid red;}
  </style>
</head>
<body>
  <p class="class1 class2">THIS IS A PARAGRAPH</p>

</body>
</HTML>
```
