

a. Why do we use value attribute of <option> tag?

The value attribute specifies the value to be sent to a server when a form is submitted.

Syntax:

```
<option value=" " >..</option>
```

b. What is <input type="hidden" /> ? Why do we use?

The <input type="hidden"> defines a hidden input field.

A hidden field lets web developers include data that cannot be seen or modified by users when a form is submitted.

A hidden field often stores what database record that needs to be updated when the form is submitted.

Syntax:

```
<input type="hidden">
```

c. Difference between <input type="submit" /> and <button></button> ?

<input type="submit" /> is also an HTML element used to create a submit button in a form. It triggers the form to be submitted when clicked. It is specifically for form submission.

<button> </button> is also an HTML element used to create a button. It can be used for various purposes, including triggering JavaScript functions or actions within a form. It is a more versatile element that can be used for various actions within a webpage, including form submission.
